

## Career Opportunity

# (Junior) Project Controls Engineer

As a project controls engineer you will have a key position in large-scaled complex tenders and projects. You will work in close collaboration with the project manager and will preserve an integral view on the project. The project manager will rely on you to make plans, forecasts, management reports and analyses in the areas of time scheduling, risk analysis, cost management and scope. You will create insight in the project and your advice will be invaluable for the organization to deliver the project within time and budget.

### Your tasks:

- You will be assigned to a project team to advice the project manager in the area of project controls.
- You understand the technical coherence of the project and you are able to translate this in an integral project planning.
- You will be responsible for the entire process of planning & control. You will perform powerful analyses such as Earned Value, scenario and risk analysis.
- You advise the project manager and the project team on possible claims.
- You will master project management software packages such as Primavera P6 and MS Project.

### Our offer:

- A permanent contract with an attractive remuneration package, including a company car and group insurance.
- A challenging and varied job on the most challenging projects in the market.
- The opportunity to contribute as a key element to the growth of our Belgian office.
- Personal development by enrolling in our intense training program.
- A unique, transparent and rewarding career path in project controls or project management consulting.

## THE IDEAL CANDIDATE

- Fits in our humane & entrepreneurial company DNA.
- Has a master degree (e.g. civil, industrial engineering or business engineering).
- Has an affinity with both technique and management.
- Has preferably a first experience in a project-based organization.
- Is fluent in English and in either Dutch or French.
- Has a good knowledge of IT tools. MS Office is a must, planning software such as MS Project and Primavera P6 an asset.
- Is analytical, independent and a good communicator.
- Is flexible and eager to discover different projects and industries.

“Other than doing the analytics and delivering invaluable insights to various clients, what I personally enjoy most in my job is that it provides me with the opportunity to sit and learn from the decision makers which will definitely have a great impact on my future”

**Abdallah Baydoun**  
Project Controls Engineer since 2017

Are you that person that we are looking for to strengthen our team?
